

Our thoughts on Caboo^{dx}

Soft wide straps distribute baby's weight evenly but tailored to either spread out or stay neatly in place

4 different carry positions (including nursing/cradle position and forward facing)

Integral lumbar support reduces strain on your shoulders and back

handy pockets on either side

Baby is held high in the 'frog legged position', which naturally places less weight and strain on their developing hips

Integral cord and toggle provides extra support to naturally cup around baby's bottom

Easily adjustable to fit most wearers, pull fabric through rings to tighten
